Hi,

Here is an area for a potential project/thesis for a graduate student (doctoral or masters level). I would appreciate your suggestions on names of potential students who may be interested in this.

Thanks!

Amar

evidence-based-
design.pdf

Here is the paper I was telling you about. I will have a program that is very basic to simulate this. I would read the paper, and then we can talk. Not sure if it would make a good phd project, or just get an undergrad to write the simulation, which I have a good idea about how it should work. I think for a phd it would need to include a real-options model along with a very advanced simulation.
