Hello Dr Gupta,

We had discussed that it is simulation of Hospital management system .

Having objectives like:

1. Create a queue for patients (can be multiple queues).
2. Randomly create patients (say requests) and put them in queue
3. Set a response time/serve time for every patient.
4. If there are high number of requests, response time is less and vice-versa.
5. The program must display requests and response time/serve time with randomized rate of increase and decrease of requests (patients).

Phone number: 551-358-0889

Wish you a colorful and a very happy Holi!!

Thank you

-Nitish Pisal

Nitish,

I am talking with another prospective candidate for the position. Did you get any material from Dr. Gaynor about what he wanted you to do in Python? It will be good if you can send me a message with those details asap so that I can forward the same to this student who is very good with python.

Pl. include your phone number in your response to me.

Dr. Gupta,
Thank you so much for helping me.

Nitish: Prof Gaynor is co-researcher and co-author of several papers with me. He is a good mentor. If he selects you, you will be working under his supervision and less supervision by me. The payment will come from Pace. This is a joint endeavor with his university. You can let him know preferred times to talk by phone with your preferred number.

If you have accepted another position, pl. let him and me know asap.

Hi Nitish my name is Mark Gaynor. I got your name from Amar Gupta. I would like to interview you by phone if possible.

Thanks.
